TITLE: Relations Between the Suppression of Sensitizer  
Fluorescence With Green Pinacryptol and Photographic  
Activity

PERIODICAL: Zhurnal nauchnoy i prikladnoy fotografii i kinemato-  
grafii, 1959, Vol 4, Nr 3, pp 234-235 (USSR)

ABSTRACT: The authors report on a number of experiments carried  
out to show the fluorescence of erythrosine and some  
other photographic sensitizers and the suppression of  
this phenomenon with green pinacryptol. During in-  
vestigation, the sensitizers were in an adsorbed  
state. In all cases fluorescence was suppressed. The  
authors provide some details on a quantitative in-  
vestigation of the system erythrosine - green pina-  
cryptol in a gelatine emulsion. Graph 1 shows the de-  
pendence of the relative fluorescence yield of ery-  
throsine and the relative light sensitivity of this

TITLE: Polymerization in highly viscous media and three-dimensional polymerization. IV. Study of free radical recombination in polyacrylate ester glasses by the electron paramagnetic resonance method

PERIODICAL: Vysokomolekulyarnyye soyedineniya, v. 4, no. 11, 1962,  
1660 - 1664

TEXT: Recombination of macroradicals at 50 - 100°C by the e.p.r. method was studied with a view to determining the specific features of polymerization kinetics in a completely structurized three-dimensional polymerization system. The recombination rate constants  $k_t$ , the activation energies and the pre-exponential factors were determined for the following three types of polyacrylate esters: МГ-9 (MGF-9), МД-1 (MDF-1), and ТГМ-3 (TGM-3). Macroradicals in these esters may be considered being some kind of polymer fragments of the three-dimensional structure with free valencies. It has been shown that, if all other conditions remain un-

changed,  $k_t$  increases with the increasing length and resulting greater flexibility of the oligomeric chains that form the three-dimensional lattice of the glassy polymer. The autoacceleration in the curing of the polyacrylates has been found to be associated with a decrease to the  $10^5$ th to  $10^6$ th part of  $k_t$  during the course of the reaction, which takes place from near-zone degree of conversion to high degrees of conversion. There are 3 figures and 1 table.

TITLE: Polymerization in highly viscous media and three-dimensional polymerization.  
VIII. Determination of the rate constants of initiation of radical polymerization  
by certain peroxides and azo initiators in incompletely set dimethacrylatebutylene  
glycol

SOURCE: Vysokomolekulyarnyye soyedineniya, v. 6, no. 7, 1964, 1256-1260

TOPIC TAGS: polymerization, organic azo compound, polyester plastic, acrylic  
plastic, organic oxide

ABSTRACT: The rate constants of initiation and decomposition in the thermal  
decomposition of benzoyl peroxide, dicyclohexyl peroxydicarbonate, and azo-  
bis-isobutyronitrile, in 1-4% by weight concentrations in dimethacrylate-  
butylene glycol, set to a degree of 40-70% were measured. It was found that  
the values of the initiation rate did not depend on the initial concentra-  
tion of the initiator. This independence indicated that no chain decompo-  
sition occurred under the reaction conditions, and only a monomolecular  
process took place. The establishment that the initiation rate does not  
depend on the degree of conversion of the polyester acrylate was additional

Card 1/2

L 19801-65

ACCESSION NR: AP5003610

evidence of the monomolecular mechanism of the decomposition of initiators in incompletely set polyester acrylate glasses with residual double bonds. It was found that the activation energies of initiation by the investigated organic peroxides coincide with the activation energies of decomposition of the corresponding initiators in benzene; the preexponential factors of initiation were approximately 2.5 times lower than the preexponential factors of decomposition. The efficiency of initiation by peroxide initiators was ~ 0.3, which is only slightly less than the theoretical value of 0.5 for the liquid phase, calculated on the basis of the theory of the "cage effect." The efficiency of initiation by azo-bis-isobutyronitrile was approximately 10 times lower. Orig. art. has 2 forms., 1 graph and 4 tables.

Class 39, No. 181300 ✓

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 9, 1966, 78

TOPIC TAGS: photopolymerization, polymerization

ABSTRACT: This Author Certificate introduces a method of preparing formulations suitable for photopolymerization. The formulations contain a polymer base, a compound that can be polymerized and a polymerization initiator. To stabilize the material and to plasticize it temporarily during processing, the compound containing in its chain groups  $\begin{array}{c} | \\ -C-S-C- \\ | \end{array}$  is suggested as suitable for polymerization. 6346. CALCULATION OF THE ATTENUATION OF HIGH-FREQUENCY CURRENTS IN 6-15 KV FEEDERS. BY B. V. Smirnov.  
Elektrichesvo, 1957, No. 1, 46-51. In Russian.

The recent development of h.f. communication on 6-15 kV lines has focused attention upon the h.f. transmission characteristics of these lines. The existing instructions in the U.S.S.R. etc drawn up for 110-220 kV lines of great length, the conductors of which consist exclusively of non-ferrous metals, whereas 6-15 kV lines and feeders, particularly in agricultural districts are utilizing steel conductors to an increasing degree. The present paper supplements the instructions for lines of the latter type. In the case of 6-15 kV lines using non-ferrous conductors in the range of 40-250 kc/s the procedure for measuring and calculating the h.f. parameters can be taken from the instructions. Special distinctions have to be made between lines more than 50 km long, between 15 and 20 km long, and shorter lines. Graphs are given showing attenuation v. frequency for various lengths of line and equations for determining losses at frequencies from 40-250 kc/s are presented.

TOPIC TAGS: scientific personnel, electric network, lightning

ABSTRACT: Professor Lev Yefimovich Ebin, 60, graduated in 1928 from the Kiyevskiy elektrotekhnicheskiy institut (Kiyev Electrotechnical Institute). Between 1929 and 1936, he worked in the Donenergo system and published various original papers on lightning protection and grounding devices. From 1936 EBIN works at the Vsesoyuznyy nauchno-issledovatel'skiy institut elektrifikatsii sel'skogo khozyaystva (All-Union Scientific Research Institute for the Electrification of Agriculture) where he heads a laboratory. In 1937, he defended his candidate's dissertation and in 1951 his Ph. D. Thesis dealing with studies of the nonsymmetrical operating conditions of electrical networks and of stationary and nonstationary electro-thermal processes in the

TITLE: A method for calibrating acceleration pickups working under pulse conditions. Class 42, No. 159668

SOURCE: Byul. izobret. i tovark. znakov, no. 1, 1964, 48-49

TOPIC TAGS: acceleration pickup, accelerometer, accelerometer calibration, acceleration pickup calibration

ABSTRACT: The patient describes a method for calibrating acceleration pickups working under pulse conditions in a shock tube under the action of a gas dynamic pulse load. For determining the sensitivity of the pickup in a wide range of accelerations, the pickup is mounted in a sliding piston inside the shock tube. The displacement of the piston due to the action of the gas dynamic pulse load determines the sensitivity of the pickup. (see Enclosure 01).

 TITLE: Results of the Competition for the Best Improving Suggestion (Ktoj konkurs na luchshaya rassionalizatorstvoe prelozhenny)

PERIODICAL: Gospodnya i Kartografija, 1959, Nr. 7, pp 17-21 (USSR)

ABSTRACT: In May 1959, the ordinary competition for the best improving suggestion in the field of topographic-geodetic and cartographic production was concluded at the Glavnaya Upravleniya Geodesii i Kartografii MVD SSSR (Main Administration of Geodesy and Cartography of the Ministry of Internal Affairs of the USSR). 7 aerogeodetic services, 6 cartographic institutes and MTSCH took part. A total of 50 topographic, geodetic and MTSCH work parts. The 1st prize in cartography, suggestions were submitted by A. Korovin and V. V. Grusov of 1,000 rubles was awarded to A. Korovin "Cartographic Manuscript Kartograficheskaya fabrika (Kina) or 1000 Blocks". "Painting Patent of Art" 1st place for the "Paintings Patented 1958" Yaroslavl. The 2nd prizes of 750 rubles were awarded to: 1) N. V. Belakanskaya, V. M. Varashin, Yu. M. Galileev, O. I. Shchelk and L. F. Stepanov (Minsk) for "Technology of the Use of Standard Bases (Tipovaya Chuvava)" 2) I. V. Gurevitch, T. M. Sharafutdinova, L. I. Kostyleva for "Standard Bases (Tipovaya Chuvava)"

3) D. A. Lezin (Novokuznetsk AGP) for "Manufacture of Combined Diapositives" 4) D. A. Lezin (Novokuznetsk AGP) for "Accuracy of Symmetric Reduction of Work in Evaluating the Accuracy of Geodetic Data Forged by Pictures of Regular Shape" 5) M. V. Shelekhov (Novokuznetsk AGP) for "Light Collapsible Ladder of Burl for Prospecting". The 3rd prizes of 500 rubles each were awarded to 1) N. P. Sharafutdinova (Tukitak AGP) for "Establishment of Fixed Points by the Method of Thawing by Means of Vapor" 2) I. D. Pal'shik (Tukitak AGP) for "Construction of Oil-ohmancy (Tukitak AGP) for Timber Transport" 3) I. A. Kuzina (Novokuznetsk AGP (Ussazon AGP)) for "Variation in the Altitude of Photos taken on the SPD-2" 4) V. F. Tarabin (Kirovskaya AGP (Kirovsk AGP)) for "Design of Geodesic Machine by S-7" 5) V. V. Gurevich, Z. I. Aleksandrova, S. V. Slobodchikov and L. A. Kostyleva for "Mechanism and Location of Contact Mechanism in the Microscope by Today" 6) A. I. Toksikov (Terekhovskoye AGP with Paper Roll" 7) A. I. Toksikov (Terekhovskoye AGP) for "Compilation and Edition of Topographic Maps by Technological Method" 8) M. P. Glushchanin (Kirovskaya Kartograficheskaya fabrika (Kirovsk Cartographic Institute)) for "Vertical Milling Machine for Broaching" 9) A. A. Yushkevich (Kirovskaya Kartograficheskaya fabrika (Kirovsk Cartographic Institute)) for "Mechanism of the Loading of Trucks with Paper Roll" 10) A. I. Toksikov (Terekhovskoye AGP (Ussazon AGP)) for "Replacement of the Arc Lamp for the Illuminating Device With Graphic-Printing Machine KP-1" by an Illuminating Lamp D-40" 11) G. L. Grigor'ev (Gverdovskoye Ussazon Lampenfabrik AGP) for "Indicator for Braking in the Peperomia AGP (Gverdovsk AGP) for "Pulsules and Final Computation" 10) G. L. Grigor'ev (Gverdovskoye Ussazon Lampenfabrik AGP (North-west AGP)) for "Indicator (Gverdovskoye AGP (North-west AGP)) for "Indicator of the Contact Mechanism in the Microscope by Today" 12) N. N. Slobodchikov (Novokuznetsk AGP (Novosibirsk AGP)) for "A More Rational Computation of Superpositions From the Trigonometric Levelling" 13) D. G. Vilner (Gverdovskoye AGP (Gverdovsk AGP)) for "The Numbering and Painting of Surveying Staffs" 14) G. N. Gribanov (Novokuznetsk AGP) for "Formulas and Table for Extremal Divergence between the Free Terms of Polar and Base Conditions Computed on a Plane and on a Ball" - Beauteous. Base conditions computed on a plane and on a ball.

The following suggestions were approved by the jury: 1) L. S. Trifilov (Gverdovsk AGP) "Underframe for Telegoniograph" 2) B. V. Odintsov (Gverdovsk AGP) "Telescopic Zones" 3) B. V. Odintsov (Gverdovsk AGP) "Underframe for Observations From the Telegoniograph"

SOV/6-59-8-13/27

TITLE:

On the Use of Continuous Shade in the Publication of Maps  
(O primenenii sploshnoy otmyvki pri izdanii kart)

PERIODICAL:

Geodeziya i kartografiya, 1959, Nr 8, pp 55-56 (USSR)

ABSTRACT:

One of the new methods used in the publication of maps is the printing of the base coloring of (continental) maps from the screen forms. The picture produced in this way is similar to a color photography reproducing a relief model. It is distinguished from an ordinary map by the fact that the picture covers the entire continental area and not only the shaded mountain slopes as it is the case with the ordinary shade. The greatest three-dimensional effect is produced by applying under the base colors the complete relief picture in achromatic colors (black or grey) so that the colors look even more harmonious and the plasticity of the relief forms is increased. At the NRKCh a continuous shade has been used since 1947. It has been used for tourist maps of high-mountain regions, for world maps at a small scale in the second volume of the Morskoy atlas (Sea Atlas), for school maps 1 : 5,000,000 , for the physical chart of the USSR

Card 1/2

On the Use of the Continuous Shade in the  
Publication of Maps

SOV/6-59-8-13/27

for primary schools, and for the map of zones of nature of the USSR. A number of recommendations is given with regard to the execution of this method. It is also pointed out that such relief maps are to be found in great numbers in foreign countries - Germany, Great Britain, and the United States.

Author : Smirnov, D. I.

Title : Reflex from the superior vena cava on lymphatic vessels

Periodical : Byul. eksp. biol. i med. 6, 19-21, June 1955

Abstract : Author describes his experiments proving that reflex connections exist between the upper vena cava and lymphatic vessels. This confirms data on the reflex ties between the venous and the lymphatic systems. It also shows that increase of venous pressure in various sections of the venous system can affect the lymphatic vessels. 6 references, 6 USSR, 4 since 1940, graphs.

Title : Reflexes from the [blood] vessels of the lesser pulmonary circle  
on blood and lymphatic vessels

Periodical : Byul. eksp. biol. i med. 8, 14-18, Aug 1955

Abstract : Author investigated the part played by the lymphatic system in  
the reflex regulation of circulation and particularly the appear-  
ance of reflex activities in lymphatic vessels on the lesser pul-  
monary circle. He was also interested in the reflex activity from  
pulmonary vessels on other divisions of the cardiovascular system.  
Dogs under narcosis and being given artificial respiration were  
used. Author used the perfusion method while studying the thoracic  
lymphatic field. Irritation of the pulmonary branches of the vagus  
nerve and emoblism of the lesser circle were produced with an emul-  
sion of lycopodium. 14 references, 11 USSR. Graphs.

AUTHOR: Smirnov, D.I.

TITLE: Switch-over of conditioned reflexes to time

PERIODICAL: Zhurnal vysshykh nervnykh deyatel'nostei imeni I.P. Pavlova, v. 12, no. 5, 1962, 932 - 938

TEXT: 'Switch-over' is a term denoting the changing of a positive into a negative conditioned response or vice versa, following application of any other stimulus associated with the original conditioned stimulus. This study is an attempt to establish a) whether application of such secondary stimuli or 'switches' can induce an animal to develop 2 different rhythms of one and the same response and b) whether alternating application of these 'switches' can cause an animal to change from one rhythm to the other - in other words, can conditioned reflexes be based on the perception of 'pure' time. The standard response was the pulling of a ring by a rabbit, reinforced when rewarded by a piece of carrot. At intervals of 5 minutes the sound of a bell signalled reinforcement of the response by foot; later the bell was stopped and reinforcement followed every 5 Card 1/2

✓ Smirnov, D. M. On the theory of locally nilpotent groups.  
Doklady Akad. Nauk SSSR (N.S.) 76, 643-646 (1951).

(Russian)

A subgroup  $H$  of a group  $G$  is called infra-invariant in  $G$  provided for every inner automorphism  $\varphi$  of  $G$ , either  $\varphi(H) \subseteq H$  or  $\varphi(H) \supseteq H$ . The concepts of infra-invariant subgroup and normal subgroup coincide not only when  $G$  is periodic, but also when  $G$  is locally nilpotent. A group is Hamiltonian when each of its cyclic subgroups is infra-invariant. Let the group  $G$  have an upper central series  $1 = Z_0 \subset Z_1 \subset \cdots \subset Z_\gamma = G$  with  $\gamma \leq \omega$  such that the maximal periodic subgroup of each  $Z_n/Z_{n-1}$ , for  $n \geq 2$ , satisfies the minimal condition for subgroups; if  $Z_1$  is finite, so is  $G$ ; if  $Z_1$  is periodic,  $G$  need not be. If a torsion-free group has an upper central series with  $\gamma \leq \omega$  and if  $Z_1$  contains no complete subgroup, then neither  $G$  nor any factor of the series contains any complete subgroup. In a locally nilpotent torsion-free group the normalizer of any servant subgroup is also servant. Other results pertain to Abelian subgroups of types  $A_1, A_4, A_8$  as classified by Ma'lev [Doklady Akad. Nauk SSSR (N.S.) 67, 23-25 (1949); these Rev. 11, 78].

Gluskov, V. M. On the central series of infinite groups.  
Mat. Sbornik N.S. 31(73), 491-496 (1952). (Russian)  
In a group with an ascending [descending] central series,  
a so-called ZA-group [ZD-group], the length of the upper  
[lower] central series is called the ZA-class [ZD-class] of  
the group. Several questions generalizing to the transfinite  
use known facts about groups with finite ZA-class or

(Ouse R)

ZD-class are answered. Foremost is the result that for every ordinal  $\gamma$ , there exists a ZA-group with ZA-class  $\gamma$ . But, moreover, there exists such a group with the additional property of being a ZD-group with ZD-class not exceeding  $\omega$ . This contrasts the fact that a ZA-group which has a finite ZD-class must have its ZA-class also finite. For every ordinal  $\gamma \geq \omega + 1$ , there exists a ZA-group with ZA-class  $\gamma$  which is not a ZD-group. Since [according to the (unavailable) dissertation of D. M. Smirnov, Ivanovskil Gos. Pedagog. Inst., 1951] the ZD-class of a ZA-group with ZA-class  $\omega$  can not exceed  $\omega + 1$ , only two possibilities exist for the ZD-class, namely,  $\omega$  and  $\omega + 1$ ; examples show that each possibility can be realized. If one of the maximal abelian normal subgroups  $\mathfrak{A}$  of a ZA-group  $\mathfrak{G}$  is contained in a hypercenter with finite ordinal, then the ZA-class of  $\mathfrak{G}$  is known [using the cited dissertation] to be finite; by contrast, if  $\mathfrak{A}$  is contained in a hypercenter with ordinal not exceeding  $\omega$ , then the ZA-class of  $\mathfrak{G}$  can be arbitrary. All these results follow readily from the main theorem asserting, for arbitrary ordinal  $\gamma$  and arbitrary field  $P$ , the existence of a group of type  $P_\gamma$ . A complete description of the so-called type  $P_\gamma$  is too lengthy to be cited here. R. A. Good.

"Groups of Automorphisms of Resolvable Groups,"  
D.M. Smirnov, Ivanovo

"Matemat Sbornik" Vol 32 (74), No 2, pp 365-384

Article investigates groups of automorphisms of resolvable  $A_3$  groups. Some of the results obtained are similar to those of A.I. Mal'tsev "Certain Classes of Infinite Resolvable Groups" ("Matemat Sbornik" 28(70) (1951), 567-588) on matrix groups. The problem of whether the group of all automorphisms of a resolvable  $A_3$  group admits isomorphic representation by matrices remains unsolved for the time being.

Smirnov, D. M. On groups with upper central series.  
Mat. Sbornik N.S. 33(75), 471-484 (1953). (Russian)

Section 1 is devoted to the following theorem: if the upper central series of a group has length  $\omega$ , then at least one of its factors does not satisfy the minimal condition for servant subgroups. Section 2 provides the proofs for some of the results announced in an earlier paper by the author [Doklady Akad. Nauk SSSR (N.S.) 76, 643-646 (1951); these Rev. 12, 587]. R. A. Good (College Park, Md.).

57-60. (Russian)

*Maths*  
In a group a finite normal series every infinite factor of  
which is commutative is called a *B*-series. A group having  
a *B*-series is called a *B*-group. The principal result states  
that every *B*-group is the extension of a solvable group by  
a semisimple finite group. Numerous properties are listed  
for *B<sub>i</sub>*-groups, where, for *i*=1, 2, 3, 4, 5, a group is called  
a *B<sub>i</sub>*-group if it has a *B*-series; the abelian factors of which  
have type *A<sub>i</sub>*, in the sense of Mal'cev [Mat. Sb. N.S.  
28(70) (1951), 567-588; MR 13, 203]. R. A. Good.

AUTHOR: Smirnov, D.M. (Ivanovo) SOV/42-13-3-24/41

TITLE: Some Remarks on Solvable Groups of Finite Rank (Neskol'ko zamechaniy o razreshimykh gruppakh konechnogo ranga)

PERIODICAL: Uspechi matematicheskikh nauk, 1958, Vol 13, Nr 3, pp 236-237 (USSR)

ABSTRACT: The author considers properties of solvable groups of the types  $A_3$  and  $A_4$  in the classification of Mal'tsev (see Matematicheskiy sbornik, 1951, Vol 28, pp 567-588).  
Theorem: Every solvable  $A_4$ -group is closed.  
Theorem: The group of all automorphisms of a solvable  $A_4$ -group is finite or countable.  
Theorem: A solvable  $A_4$ -group cannot be isomorphic to one of its real factor groups.  
For the  $A_3$ -groups these assertions in general are not valid.
